

Body System Project

We have just finished studying the Body Systems and now it is your job to show the class what you have learned. Your job is to work in a group of 4 designing a human body that you will present.

Choose a body system that you would like to draw (either the digestive system, circulatory system or respiratory system). You will be given large paper to trace your body outline. You may want to start this in pencil just in case you need to make any changes. Your job is to draw **all** the parts of that particular body system. Each part needs to be labeled correctly, look in your notes. If you need to, go online and make sure you have the right parts in the right places!

You need to also provide the function of that body system and a title for your body.

Make your body system colorful; you will have plenty of time in class to work on this.

Remember, you are working in a group. You may want to start by thinking of what jobs need to be done in order to complete this work. Make sure each member of your group has an assignment!
